

UNIFIED COMMAND PLAN

- **Published every two years**
- **9 Unified Commands**
 - **5 Geographic**
 - **4 Functional**
- **Minor geographic CINC changes**
- **Functional Command changes were targeted**
 - **JFCOM changes and USSPACECOM were significant**

US SPACE COMMAND

- INFORMATION OPERATIONS
 - **Computer Network Defense (JTF CND)**
 - **Computer Network Attack (JTF CNA)**
- Changes could ultimately end up creating a US Space and Information Command

JOINT FORCES COMMAND

- Hybrid Command
 - Functional and Geographic responsibilities
- Issues:
 - Homeland Defense
 - JTF Civil Support to lead agencies
 - WMD incident in CONUS (CM mission)

UCP 21

- **Separate JFCOM functional and geographic responsibilities**
 - **JFCOM**
 - **USCOM**
- **Geographic issues**
 - **Mexico, Canada, Russia, Antarctica**

Planning Issues

- JOPES Vol II
 - MAT Annex Q generation
 - Future Plans and ESP Update
- Increasing use of ESP 4000 (after revision)
- US/UK bilateral negotiations

Medical NBC Casualty and Resource Estimation Support Tool (NBC CREST)

Training Course
Version 0.90

Center for Army Analysis
Fort Belvoir, Virginia
1-2 June 2000

Medical NBC CREST

Project Overview

- Purpose
 - Enable advanced planning for medical operations in an NBC environment
- Objective
 - Provide Medical Planners with a Tool Set to:
 - Estimate NBC casualties
 - Estimate medical requirements
 - Analyze alternate medical Courses of Action (COAs)
- Government Participants
 - OTSG, AMEDDC&S, MRMC, CHPPM, FORSCOM, AFRRI, CINCs, JCS, ASD-HA, JRCAB, U.S. Army Medical Elements...

NBC CREST v0.9 is Based on **U.S. Army Medical Doctrine**

- Deliberate medical planning
- NBC only
- Focused on U.S. Army medical planning for a battlespace environment
- Multiple planning levels (Corps, Division, Brigade)
- Expect eventual extension to
 - Joint planning (coordination with MAT)
 - Civil Support

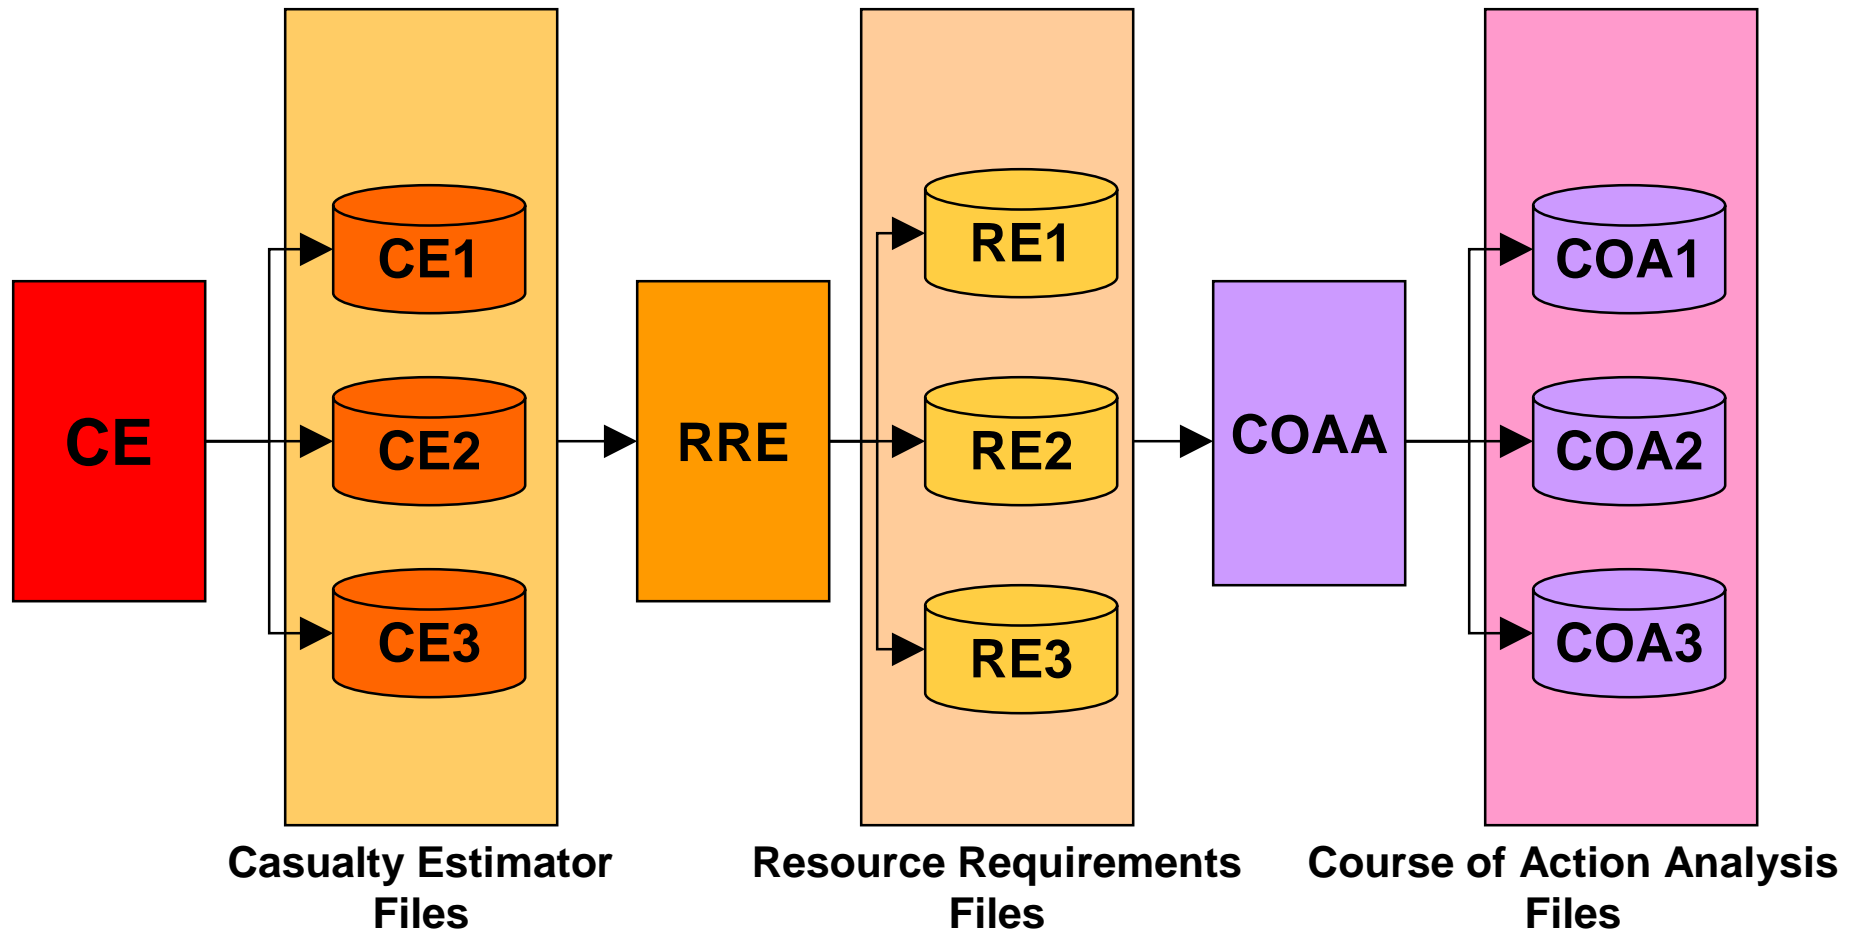

NBC CREST Supports Specific Planning Needs at Each Level

- Select pre-defined deployments or define tailored deployments.
- Select pre-defined attack scenarios or define new attacks
- Quickly estimate area logistical requirements with military and/or civilian population at risk
- Perform a detailed COA analysis based on deployed medical treatment facilities (MTFs)

Multiple Files

CE Module Supports User-defined Scenarios

- Planner defines the NBC casualty/attack scenario in accordance with current threat assessment and operational requirements

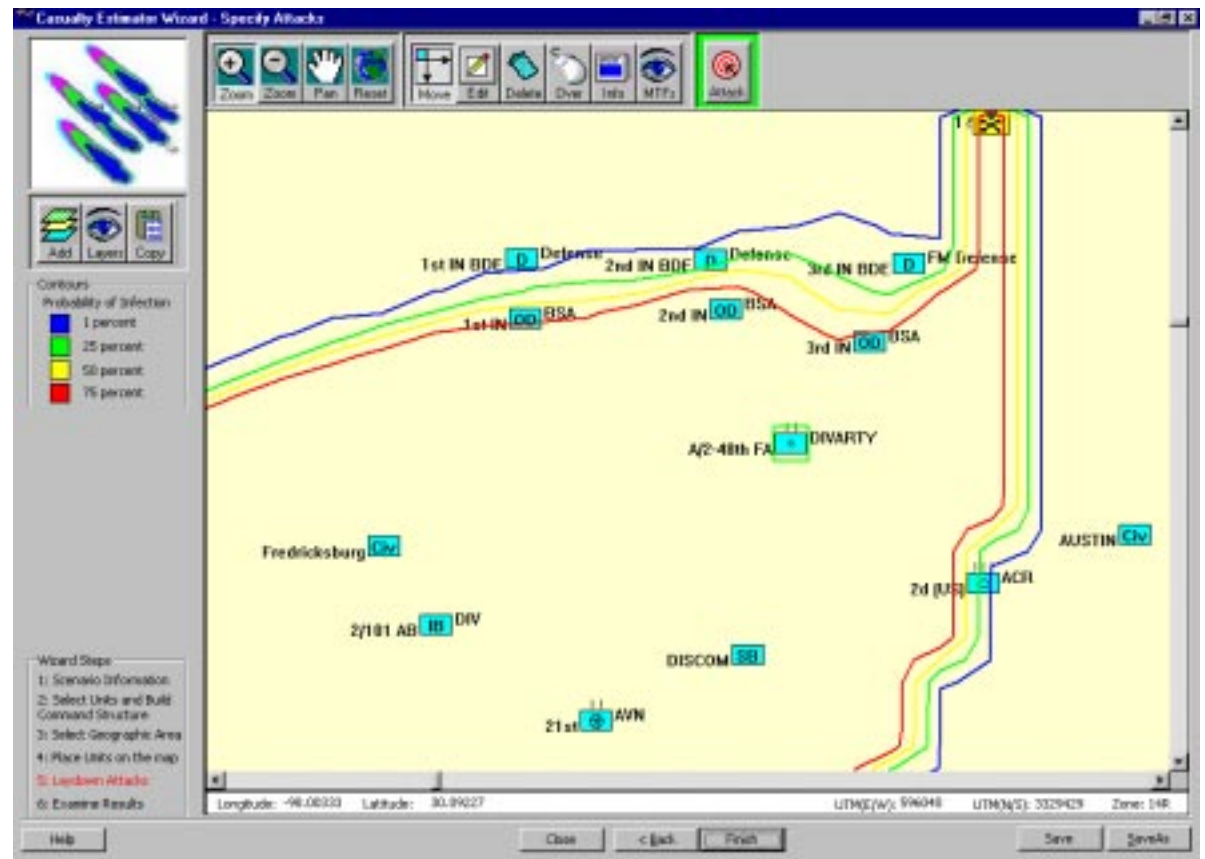

Positions units

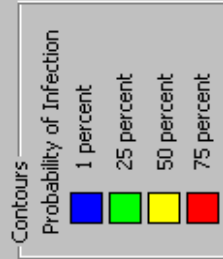

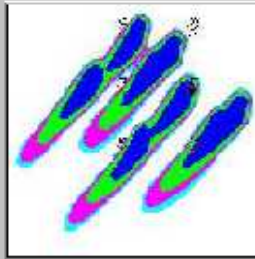

Choose attack

Specify vulnerable units

Executes (finishes) calculations

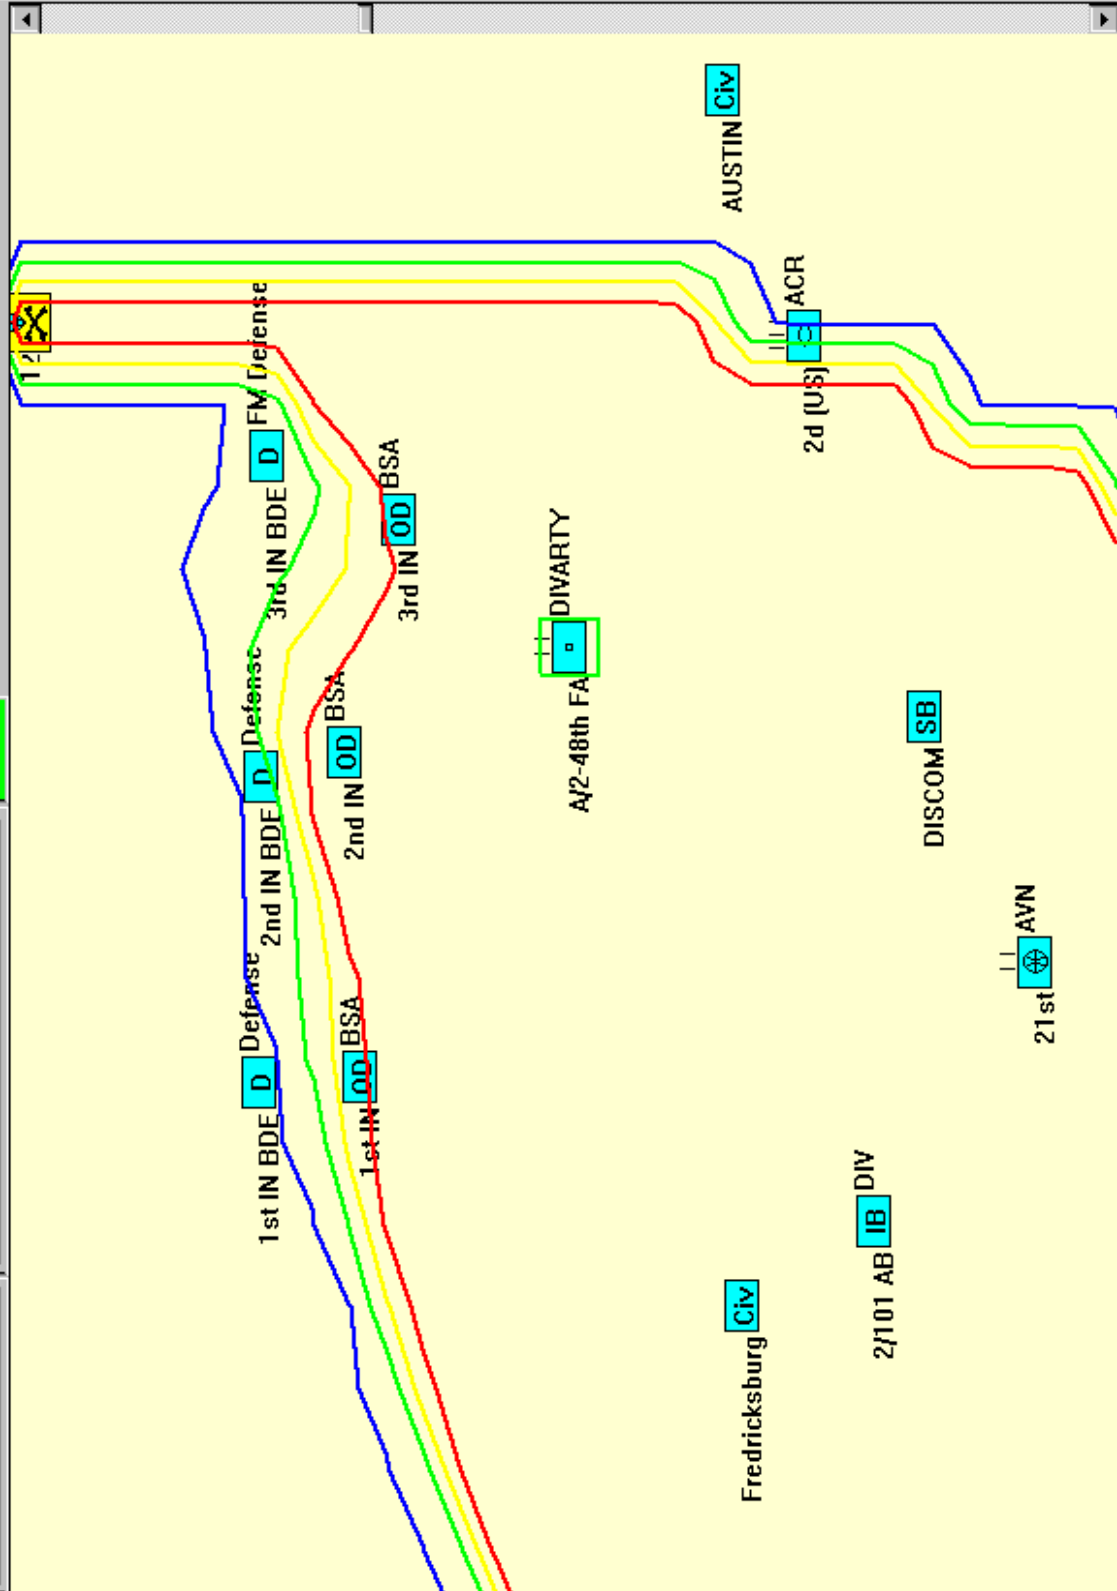

Save patient stream

Wizard Steps

- 1: Scenario Information
- 2: Select Units and Build Command Structure
- 3: Select Geographic Area
- 4: Place Units on the map
- 5: Laydown Attacks
- 6: Examine Results

Longitude: -98.00333 Latitude: 30.09227

UTM(E/W): 596040 UTM(N/S): 3329429

Zone: 14R

RRE Module Provides Quick Estimates of Logistical Requirements

- Planner sets up RRE run by selecting
 - Casualty stream
 - Military and/or Civilian casualties
- Estimates medical requirements:
 - Class VIII
 - Evacuation
 - Personnel
 - Beds

COAA Module Evaluates Possible Medical Courses of Action

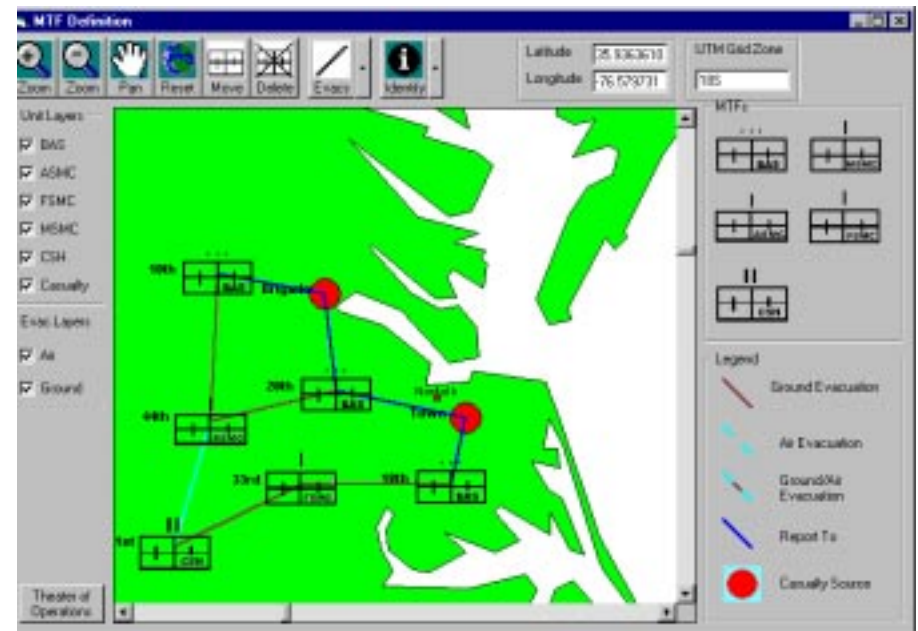

- **Planner sets up COAA run by selecting:**

- Resource estimation file
- Military and/or civilian
- MTF network

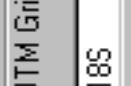

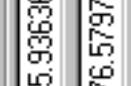

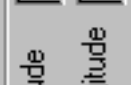

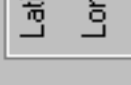

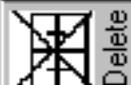

- **Resource requirements compared to available resources**

- Shortfalls highlighted
- Results presented graphically

- **Iterate to mitigate shortfalls**

MTFs

Legend

Key Design Assumptions and Constraints

- Static Population (location and size)
 - Medical Treatment Facility near insult point
- Same models for both military and civilian
 - Human Response
 - Treatment Patient Condition (PC) codes
- MOPP Gear ...
- Multiple Insults
 - Single insult per individual
- Biological attacks
 - PC Code generation assumes knowledge of agent involved

Planned Capabilities

- Biological attacks
 - Tularemia, Q fever, SEB
 - Anthrax, botulism, plague, VEE
 - ...
- Chemical attacks
 - Sarin (GB)
 - VX
 - Mustard (HD)
- Nuclear attacks
 - User-selected yield

Plans for Further Development

- Refinements for Army Use
 - Account for prophylaxis
 - Account for MTFs involved in attacks
 - Decontamination resources
 - Provide link to the Casualty Training System (CTS)
 - Improve plume import capability
 - Utilize TPFDD for force structure including medical component of MTOE (?)
 - Submit to Army VV&A
- Move to Joint arena
 - GCCS capability
 - MAT compatibility
 - Integration with MAT
